Bachelor / diploma thesis

Quality monitoring of stamping process for system components

Background: To improve the robustness of the stamping process the quality monitoring and the process itself should be investigated.

Objective targets for the thesis:

- ☐ Development of a failure catalog for the stamping process
- ☐ Quality analysis of the stamping process
- ☐ Identification of most important process parameters
- ☐ Failure influence analysis
- ☐ Recommendation for release criteria of the stamping process and inline checks

Result of the thesis: Measures for the robustness improvement of the stamping process of system components
