BRADFORDŮV ZÁKON

PROCES VÝBĚRU ČASOPISŮ SPOLEČNOSTI THOMSON REUTERS

VÝBĚR ČASOPISŮ: HLAVNÍ CÍLE

1. Hodnotit a vybírat nejlepší vědecké časopisy a ten nejlepší obsah pro **indexaci** ve Web of Science.

Díky tomu je Web of Science vnímána jako celosvětový zdroj nejlepšího vědeckého výzkumu publikovaného v nejlepších mezinárodních a regionálních časopisech.

2. Poskytovat nakladatelům po celém světě **objektivní standardy** užitečné pro vytváření publikací světové úrovně.

Thomson Reuters vytvořil dlouhodobé vztahy s globální komunitou nakladatelů. Pracujeme společně s cílem zvyšovat kvalitu vědecké komunikace po celém světě.

Potřebné informace jsou poskytovány na základě konzistentního procesu výběru

Každoročně je hodnoceno
přes 3 000 časopisů

Neural circuits underlying the pathophysiology of mood disorders

Abstract: Although mood disorders constitute leading causes of disability worldwide, the neural networks that support emotional behavior (mainly determined by the interplay of anatomy, physiology, and neurochemistry in humans) are poorly understood. The elucidation of these networks towards elucidating the pathophysiology of major depressive disorder (MDD) and bipolar disorder (BD). In this review, we integrate insights from human and animal studies, which collectively suggest that MDD and BD involve dysfunction within an extended network including the medial prefrontal cortex and anatomically-related limbic, striatal, thalamic and basal forebrain structures.

Abstract: Although mood disorders constitute leading causes of disability, until recently little was known about their pathogenesis. The delineation of anatomical networks that support emotional behavior (mainly derived from animal studies) and the development of neuroimaging technologies that allow in vivo characterization of anatomy, physiology, and neurochemistry in human subjects with mood disorders have enabled significant advances towards elucidating the pathophysiology of major depressive disorder (MDD) and bipolar disorder (BD). MDD and BD involve dysfunction within limbic and prefrontal forebrain structures.

Regionální časopisy

- Jejich důležitost je měřena z hlediska specifičnosti obsahu :
 - Obohatí pokrytí vědeckého oboru?
 - Poskytne specifickou regionální perspektivu?
- Je publikován špičkový výzkum, který je cílován více na regionální než na mezinárodní čtenáře?
- Citační vliv může být nízký až mírný – ale stabilní
- I regionální časopisy musejí splňovat všechna kritéria výběru

Proces výběru časopisů do Web of Science

- Nové časopisy
 - Citace na předcházející práce autorů a editorů
- Zavedené časopisy
 - Estimated Impact Factor
 - Jak si časopis vede v porovnání s dalšími časopisy v daném oboru

Pro určení důležitosti a vlivu časopisu

Kalkulace Impact Factoru

$$\text{Impact Factor (2012)} = \frac{\text{Citace v roce 2012 na články publikované v letech 2010 a 2011}}{\text{Články publikované v letech 2010 and 2011}}$$

Journal: ACADEMY OF MANAGEMENT REVIEW

Většina časopisů má úroveň autocitovanosti do 15%.

Zdroj: JCR Science Edition (2010)

- Příliš vysoká autocitovanost oslabuje integritu Impact Faktoru daného časopisu
- Časopisy s **příliš vysokou úrovní autocitovanosti** mohou být z *Journal Citation Reports* vyřazeny, dokud nedojde k nápravě

By Jim Testa, VP, Editorial & Publisher Relations

updated 5-2012

Thomson Reuters is committed to providing comprehensive world's most important and influential journals to meet its awareness and retrospective information retrieval needs. SM covers over 12,000 top tier international and regional journals in the natural sciences, social sciences, and arts and human

But comprehensive does not necessarily mean all-in

WHY BE SELECTIVE?*

It would appear that to be comprehensive, an index of the social science literature might be expected to cover all journals published. It has been demonstrated, however, that a relatively small number of journals contain the majority of significant scholarly results. This principle is often referred to as Bradford's Law.²
